TECHNICAL SKILLS

BLOCKCHAIN & WEB3

Solidity, Rust (Anchor), Hardhat, Foundry, OpenZeppelin, Ethers.js, Web3.js.

BLOCKCHAIN NETWORKS

Ethereum, Solana, Polygon, Binance Smart Chain, Optimism, Base, Arbitrum , Avalanche.

DEFI PROTOCOLS & APPLICATIONS

AMM DEX, Lending/Borrowing, Staking, Vesting, DAO's, LayerZero, Liquidity Pools, Oracle Integration, Cross-chain Bridges

SECURITY & TOKEN STANDARDS

ERC-20, ERC-721, ERC1155, UUPS Proxy, Multi-signature Wallets, Foundry, Slither & Mythril.

PROFESSIONAL SUMMARY

Certified Blockchain Developer with 2+ years specializing in architecting secure smart contracts and dApps across EVM, Solana, and Hyper ledger ecosystems. Proficient in Solidity and Rust (Anchor) with deep expertise in Hardhat, Web3.js, and Ethers.js. Experienced in building gas-optimized DeFi protocols, DAO's, NFT marketplaces, layerZero Protocols and Real-World Asset (RWA) tokenization platforms.

EXPERIENCE

BLOCKCHAIN DEVELOPER **JULY 2024– PRESENT**

SoluLab - Ahmedabad, Gujarat

- Built 10+ production smart contracts across Ethereum, Solana, and Layer-2 solutions with zero critical vulnerabilities.
- Developed full-stack DeFi protocols including AMM DEXs, lending platforms, staking and vesting systems and DAO's.
- Implemented cross-chain infrastructure with bridge protocols handling $1M+ daily transaction volume.
- Optimized gas costs by 30-50% through advanced Solidity patterns and assembly code optimization.

INTERNSHIP AND CERTIFICATION PROGRAM **APR 2022 – NOV 2022**

IIT Kanpur - Kanpur

- Worked with IIT professionals with live projects for 6 months.
- Learned foundational smart contract security practices and comprehensive testing methodologies.

TOP PROJECTS

SOLULAB **JULY 2024- PRESENT**

Xerovan (Multi-Chain Wallet & Web3 Infrastructure)

Technologies used: Dynamic SDK, LiFi,0x,CCTP, Solidity, viem, ethers.js , React Native, EIP -1193, EIP - 6963, EIP - 712, EIP -3326 and 10 blockchain networks.

- Architected the blockchain layer with Dynamic Labs, designed the Li.Fi / 0x / CCTP-backed Send-Swap-Bridge routing engine with best-route selection, built an in-app dApp Browser , and delivered per-origin multi-wallet session management , EIP-712 typed-data decoding, decoded ERC-20 / ERC-721 consent params .

AFL Mint

Technologies used: Solidity, Hardhat, OpenZeppelin Upgradeable (UUPS), Ethers.js, Base USDC, Crossmint, ReentrancyGuard, AccessControl.

- Led end-to-end migration of the AFL digital collectibles ecosystem from Flow (Cadence) to Base (EVM L2), re-architecting 7 production Cadence contracts into gas-optimized Solidity while preserving 1:1 tokenId and templateId parity for 200K+ existing NFTs.

FRONTEND DEVELOPMENT

React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, HTML5/CSS3

BACKEND & DEVOPS

Node.js, Express.js, MongoDB, PostgreSQL, Redis, Docker.

Founoun NFT Marketplace
Technologies used: Solidity, Lazy minting, EIP-2981, EIP-712

- Developed a hybrid payment NFT Marketplace featuring a Lazy Minting mechanism. Implemented off-chain signature verification logic to securely bridge fiat payment gateways with onchain minting execution, reducing transaction friction.

EcoYield Energy (MVP)
Technologies used: Solidity, Hardhat, OpenZeppelin UUPS, Chainlink Oracles, Merkle Trees, Snapshot DAO, Ethereum**.**

- Built an upgradeable ERC-20 token with 10-phase ICO, multi-currency payments (ETH/USDC/USDT) via Chainlink price feeds, and 8 role-based vesting schedules. Developed a staking contract with time-locked multipliers, and Merkle tree whitelisting with ReentrancyGuard security and Integrated Snapshot DAO for off-chain governance voting.

LydiaCoin
Technologies used: Solidity, Hardhat, OpenZeppelin UUPS, Multi-Sig Governance, Ethereum Sepolia.

- Built 4 upgradeable smart contracts — ERC-20 utility token (BSW), stablecoin (LYD) with two-phase burn approval, M-of-N multi-signature treasury vault, and dual-token distribution hub and multi-sig governance with configurable approval thresholds and also Implemented role-based access control, blacklist management, ReentrancyGuard,

Guild (Musical Marketplace)
Technologies used: Solidity, Hardhat, OpenZeppelin UUPS,ECDSA, Base Sepolia

- Architected a dual-ecosystem NFT platform supporting 19,999 assets. Engineered a gas-optimized dynamic pricing engine using offline signing and on-chain ECDSA verification (EIP191). Implemented a multi-recipient royalty standard with transferable management rights.

landhacker
Technologies used: Node.js, Microservices, RabbitMQ, Kubernetes

- Architected 12-service microservice system using Node.js. Implemented RabbitMQ for event- based service communication. Built scalable API gateway with rate limiting and authentication. Deployed on Docker and Kubernetes for production scalability.

PERSONAL PROJECTS

WebWallet
Technologies used: Solidity, Hardhat, OpenZeppelin, Node.js, Express, and vanilla JavaScript.

- A comprehensive multi-chain cryptocurrency wallet supporting 12 blockchain testnets across both EVM(8 Networks) and Non-EVM networks(4 Networks). Create random wallets for any supported network, Import wallets using private keys. Transfer native currencies and tokens. Generate QR codes for easy address sharing.

Solana Dex
Technologies used: Rust, Anchor, Solana, CPI, AMM

- As part of pre-sales project ported Uniswap V2 (XY=K) AMM logic from EVM to nonEVM architectures. Developed DEX implementations on Solana (Rust/Anchor).Developed Router and Factory programs with CPI calls for atomic swaps.
